

Bahan Buangan / Waste Management

Waste is things which are meant to be thrown away. **Bahan Buangan terdiri daripada benda yang tidak digunakan lagi**

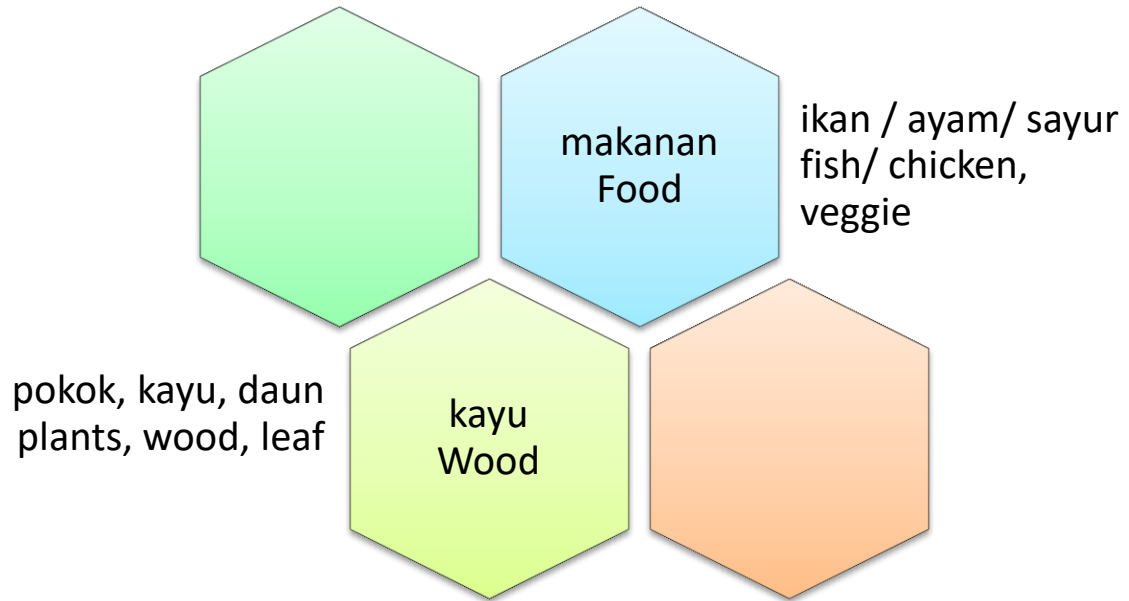

Two types of waste

1. Organic Waste / **Bahan Buangan Organik**
2. Inorganic Waste / **Bahan Buangan bukan Organik**

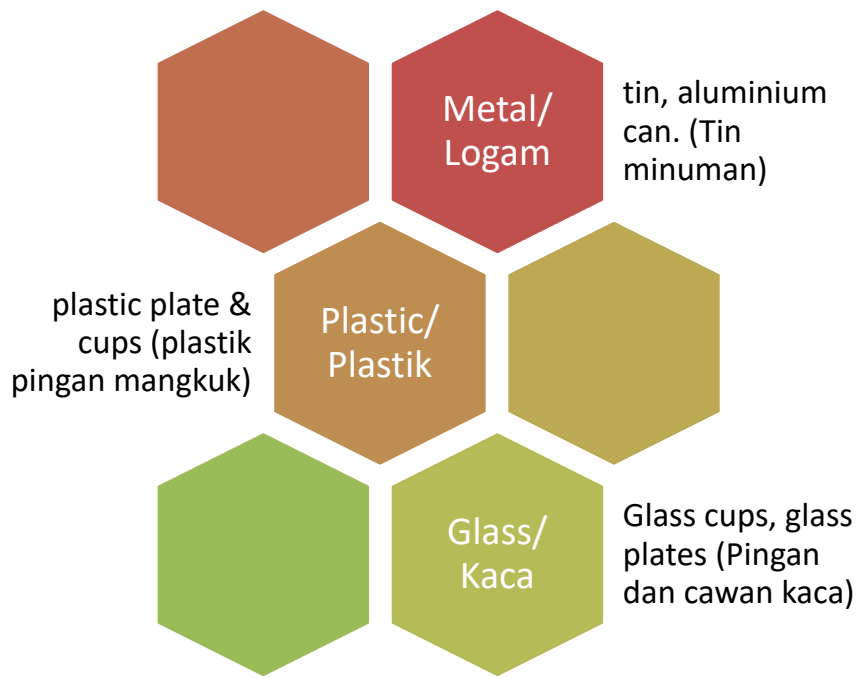

Organic Waste/ Bahan Buangan Organik

Inorganic Waste / Bahan Buangan Bukan Organik

Biodegradable / Non biodegradable Waste

Biodegradable Waste / Terbiodegrasi

Ability for waste to decompose cause by microorganism/ **Bahan yang boleh mereput disebabkan oleh mikroorganisma**

What is the impact to the environment / **Kesan buangan**

1. Bad smell / **Mengeluarkan bau busuk**
2. Makes a place dirty / **Mengotorkan kawasan persekitaran**
3. Kill aquatic animals because decomposes uses oxygen and this will cause aquatic animals experience less oxygen for respiration/ **Membunuh hidupan aquatic kerana pereputan menggunakan oksigen**

Non Biodegradable / Bahan Buangan Tidak Terbiodegrasi

Waste that unable to decompose / **Bahan buangan yang tidak dapat diuraikan oleh mikroorganisma**

Example

1. Plastic / **Plastik**
2. Metal / **Besi**
3. Toxic Waste / **Bahan Toksik**
